Alhambra, CA 91803

(213) 344-7935

Education

University of Southern California — Los Angeles, CA
Ph.D. in Neuroscience — *Jul. 2011 – Aug. 2017*

Tsinghua University — Beijing, China
Bachelor of Science in Physics — *Jul. 2007 – Jul. 2011*

Skills

- **Theories**: Machine Learning, Statistics, Control Theory, Deep Learning, Scientific Computing
- **Languages**: Python, R, Matlab, SQL, Java, Mathematica
- **Technologies**: Git, MySQL, TensorFlow, Spark, Kinect, CKAN

Work Experience

Innovation Solutions — Santa Ana, CA
Software Engineer Intern — *Summer 2015 & Spring 2016*

- **Summary**: Developed applications to record, analyze and report human movement kinematics and performance during Kinect video games and exercises.
- **Data Acquisition**: Implemented an application body-recorder to acquire Kinect skeleton data and smooth it with an Unscented Kalman Filter (Matlab & C#). $\sim 90\%$ of noise and spikes are filtered out.
- **Data Analysis**: Implemented an application to calculate human anatomical joint angles from Kinect skeleton data (Matlab & C#), allowing further analysis of human movement patterns in anatomical terms.
- **Report and Visualization**: Designed and implemented a web application to report full kinematics performance history to users and physical therapists (R, Shiny & SQL) with intuitive graphics.

SixThirty Incubator — Pasadena, CA
Data Scientist — *Jul 2015 – Aug 2016*

- **CKAN**: Set up CKAN Open Source Data Portal Platform in Linux environment; Deployed the platform onto AWS Cloud and Google Cloud, enabling SixThirty to publish and share datasets.

Research Projects

- **Human Movement Analysis:**:
  - **Movement Planning**: Simulated human arm movement in state space via Optimal Control Theory implemented by iterative Linear-Quadratic Regulator and Dynamic Programming in Matlab; Showed that a moderate movement velocity achieves the best accuracy.
  - **Movement Learning**: Analyzed 10+GB upper extremity kinematics data via Matlab, R and SQL; Extracted movement patterns and variability patterns via PCA and other dimension reduction methods; Unraveled the relationship between movement patterns and movement learning.
  - **Movement Learning Prediction**: Developed dynamical State Space Model with Mixed Effects to investigate the effects of rehabilitation training, allowing customization of training schedule and prediction of future performance for each individual.
- **Customer Churn Prediction**: Developed regression, tree-based and KNN algorithms to predict customer churn probability based on labeled data via Python and Spark. Achieved more than 90% accuracy.
- **Word Prediction**: Developed an application wordpred to predict the most likely following word in real time while a user is typing. Tokenized 2GB text data to train an ngram model. Deployed via Shiny framework.
